CLOSING DATE: May 21, 2019.

About us

Saba Electric Company is the sole producer and distributor of electricity on the island of Saba. With its diesel power plant located near the Fort Bay harbor and expansive distribution network, SEC supplies electricity to some 1,260 homes and businesses island-wide.

Our team is comprised of 15 dedicated workers divided into 3 departments: administration, distribution and production.

SEC's power plant is powered by 2 ABC engines and 3 reserve Caterpillar engines with a small solar installation on its rooftop. SEC also has a 1MW solar park, which accounts for about 20% of our energy demand. With another 1MW solar park on the way, we will increase our renewable energy share with the goal of decreasing our dependency of fossil fuels for electricity production.
